July 2, 2025

Dear Professor Landry,

We are very happy to hear that our revised manuscript “*Comprehensive mutational characterization of the calcium-sensing STIM1 EF-hand reveals residues essential for structure and function*” (GENETICS -2025 -308212), has been accepted for publication pending minor revision. With reviewers 2 and 3 satisfied with our first revision, we have now made a second revised version to address the lingering minor concerns noted by reviewer 1. There are textual changes to the results, discussion, and methods sections, as well as a change to Supplementary fig 9 incorporating a statistical test. We have described these changes in an attached point-by-point response document and have also highlighted any altered text in the marked manuscript files.

Thank you for taking the time to edit our manuscript; we believe this peer review process for Genetics has substantially improved our work. We hope these changes are sufficient for proceeding with publication.

Sincerely,

Nisha D. Kamath and Kenneth A. Matreyek
